

In-Viro-Drum™ PORTABLE SPILL RECOVERY UNITS
By Robyn T. Braley

When environmental damage, the health and safety of employees or local residents are at risk, rapid response and recovery is the only choice. The ABCAN In-Viro-Drum™ is a highly efficient spill recovery unit that has been used successfully in a wide variety of applications where failure is not an option.

First time users are always amazed by the suction power demonstrated by the In-Viro-Drum™. The unique design of The In-Viro-Drum™ makes each unit extremely compact and easy to transport. It can be mounted on light trucks, light tandem trailers, ATV's, light water vessels, skids, or flown by helicopter to remote spills. In most applications, a single operator is all that is required.

The hazardous spill management capabilities make the In-Viro-Drum™ an investment that brings an immediate return by reducing or eliminating risk. Any liquid, regardless of its viscosity, slurries, powders, or small solid particulates can be quickly "sucked up" by the unit and deposited into container vessels. A variety of containment vessels, including 45 gallon drums, can be used to deposit waste ready for safe disposal.

The phrase, "that really sucks" is always a compliment when referring to an ABCAN In-Viro-Drum™. ABCAN is fast becoming the preferred supplier of portable vacuum systems to leading companies and government agencies across Canada. Further information is at www.invirodrum.com.
